

Paul

Our Cyber Posture Physician

Cyberint.
Protection Beyond the Perimeter

Meet Paul, The Cyber Posture Physician

Paul is on the job to continuously assess your Cybersecurity Posture. Together with his team and crafted tools, working as an Automated Red Team, Paul tests your organization's controls, employees' awareness and your internal process for detection, prevention and response.

Paul doesn't let breaches and attacks get in your way. Instead, Paul uses our CybeReadiness suite and our CyberOPS team to simulate attacks on your network. Paul takes the perspective of a real attacker to find the holes in your system before your adversaries do. Paul keeps you one step ahead.

▶ How Paul Validates Your Cyber Posture

Paul has uniquely crafted a set of tools which we packaged into our CybeReadiness Suite, allowing him (and you) to automate and orchestrate several types of attacks against your business. These simulate real-life attack scenarios with all of the complexities involved, validating your organization's awareness, efficiency, and maturity across all stages of the attack 'Kill Chain'.

What Can Paul Test For?

[Malware Simulation, Phishing, Spear Phishing Attack, DLP testing, SIEM simulation, Reconnaissance, Social Engineering, Data Theft Attack, Account Takeover, AMAS, DDoS Attack]

▶ How Does Paul Do It?

Paul and his team continuously map and analyze your attack surface using CyberInt's Argos platform, identifying where your weakest points for attack are. He does this by following your digital footprint and understanding what needs to be tested in your defences. Additionally, Paul will question you and your team on where your crown jewels are to understand the risks associated with the weaknesses he identifies.

Together with this insight, Paul takes action in testing your resilience to an attack targeting you and your crown jewels. Based on the testing, Paul will provide you with insight into your up-to-date cyber posture, and on how you've been improving over time. Testing your organization's controls, employees' awareness, and your internal process for detection, prevention and response.

▶ Paul's Team

Paul does not operate alone. He works with his team of cyber experts to run some of the attack simulations. His team, also known as the CyberOPS team, is made up of elite whitehat hackers who are at the top of their offensive game. The team members are at the forefront of technology and cybersecurity; constantly identifying and analyzing new threats.

▶ Isn't Penetration Testing Enough?

Paul enables unprecedented automation in simulating various complex attack scenarios on your organization. The key value is that as opposed to penetration testing and gap analysis services, Paul runs ongoing testing of your cybersecurity resilience. Paul assesses the full scenario of a targeted attack against the entire organization, evaluating the organization's capability to identify and to respond to an attack, with a clear measure of the organization's cybersecurity maturity.

By combining Paul's knowledge of your weaknesses with his team's presence in the evolving threat landscape that targets you (hacking forums, underground markets, etc.), Paul allows you to adopt a proactive approach in enhancing and improving your resilience to cyber attacks.
