

# Veep

## Our VIP Guardian

**Cyberint**  
Protection Beyond the Perimeter

Meet Veep, The VIP Guardian.

---

With the growing digitalization of businesses, Veep knows how easy it is for hackers to gather information and target your company's VIPs. Your VIPs are your executives, your top customers, evangelists and any other person of high importance to your business.

---

Veep safeguards your VIPs, as they are by far the most lucrative targets for attackers. Competitive espionage, IP theft, and intelligence gathering on your planned road map, mergers and acquisitions, are just some of the incentives for cyber criminals to go after your VIPs.

Veep knows that even though your company's cybersecurity may be in good shape, your VIPs need an additional layer of protection as they either have access to your crown jewels or are influential enough to inflict major damage to your business, if compromised.

---

## ◀ How does Veep protect?

---

Veep uses **Argos, our CyberOPS team, and a few other dedicated tools** to monitor and protect your VIPs from the cyber threats that target them. VIP tracks the hackers within their communities and utilizes cutting-edge tools to identify intrusions to VIPs' endpoints and breaches of valuable data.

---

## ◀ Threats to your VIPs Digital Assets

---

While you may have all your bases covered with your company's cybersecurity, your VIPs may not be. Your VIPs have access to your company's most sensitive data and they're involved in your most classified conversations. They may have access to your crown jewels, influence your decision-making, or obtain huge stake in your business' growth and profitability.
